

Mathematical Foundations of Computer Science 1979

Filesize: 2.67 MB

Reviews

This publication is worth getting. it absolutely was writtern very completely and useful. I am quickly could possibly get a pleasure of reading a written publication.

(Ariane Rau)

MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE 1979

To save **Mathematical Foundations of Computer Science 1979** eBook, make sure you click the web link beneath and save the file or gain access to additional information which might be highly relevant to MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE 1979 ebook.

Springer Jul 1979, 1979. Taschenbuch. Book Condition: Neu. 235x155x31 mm. This item is printed on demand - Print on Demand Titel. Neuware - A sound and complete proof system for partial program correctness.- The problem of reachability and verification of programs.- Assertion programming.- Complexity classes of formal languages.- Fast probabilistic algorithms.- Relative succinctness of representations of languages and separation of complexity classes.- On two types of loops.- Full abstraction for a simple parallel programming language.- On some developments in cryptography and their applications to computer science.- Searching, sorting and information theory.- Lcf: A way of doing proofs with a machine.- Axioms or algorithms.- Power from power series.- Computational complexity of string and graph identification.- A survey of grammar and forms-1978.- A theoretical study on the time analysis of programs.- Completeness problems in verification of programs and program schemes.- Relationships between AFDL's and cylinders.- Computable data types.- Program equivalence and provability.- Interactive L systems with almost interactionless behaviour.- On the simplification of constructions in degrees of unsolvability via computational complexity.- An algebraic extension of the Chomsky hierarchy.- Bounds on computational complexity and approximability of initial segments of recursive sets.- On the weighted path length of binary search trees for unknown access probabilities.- Computational complexity of approximation algorithms for combinatorial problems.- A reduction-closure algorithm for graphs.- Small universal Minsky machines.- Parallel and two-way recognizers of directed acyclic graphs.- Fully effective solutions of recursive domain equations.- A note on computational complexity of a statistical deducibility testing procedure.- Context free normal systems.- New proofs for jump dpda's.- Synchronization and maximality for very pure subsemigroups of a free semigroup.- On the sets of minimal indices of partial recursive functions.- Some remarks on Boolean sums.- On the propositional algorithmic logic.- Ch(k) grammars: A characterization of LL(k) languages.- A uniform approach to balanced binary and...
